4.6★

Average rating

2019

Building since

We build products people **actually keep on their phones.**

Then we **operate them** — for years, at scale, at a level that shared-hosting operators cannot fake.

Six years of consumer software. Built, shipped, operated in-house.

60+

APPS SHIPPED

the 12 detailed on the site are the tip

Kahroba is Persian for amber — what preserves, what attracts.

Kahroba Studio is an independent Iranian product studio. We build and operate consumer software for the Iranian market — Android, Flutter and web — and we run every product ourselves.

The studio name (کهرابا / kahroba) is the Persian word for **amber**; literally *kāh-robā*, "straw-attractor". Amber is what preserves things, and it is the root the language reached for when it needed a word for **electricity**. Both are true of the studio.

Independent. Senior. Still shipping.

Full-stack product studio — six capabilities under one roof.

Not a menu on paper — each has shipped and is currently operating a live product.

01

Mobile Product Engineering

Native Android & cross-platform Flutter — shipped to Bazaar, Myket, and Google Play with signed release automation.

02

Backend Systems & APIs

Service-oriented backends behind live consumer traffic. Typed contracts, queue-driven workers, observability from day one.

03

Cloud Infrastructure & DevOps

Infrastructure as product. Reproducible environments, gradual rollouts, the reliability work that pays off in year three.

04

AI & LLM Product Integration

Persian-first assistants on frontier models. Multi-model routing, token budgets, safety layers, monetization that survives viral spikes.

05

UI Design & User Experience

Design systems for Persian and Latin scripts together. Typography, motion and density decided once, defended everywhere.

06

Product Operations

The unglamorous half that keeps apps alive for years. Every product operated by the same people who built it.

The stack, honestly listed.

~30 tools we work with in production — the ones we actually use, not the ones that would look good on a slide.

Beshkan Pro — access the international web, without a VPN.

A lightweight DNS-based utility that unlocks the global internet for millions of Iranian phones.

7.3M+

INSTALLS

4.3★

RATING

250K+

REVIEWS

A lightweight DNS+port utility that unlocks 2,000+ international sites and apps without a VPN. 18 servers, non-invasive Truemode ping reduction, no ad-based revenue in Pro. Tested at 7.3M+ Bazaar installs — one of the top consumer utility apps in the country.

FactorJet — professional invoicing built for the Iranian SME.

Fast invoice creation with Jalali calendar, Persian-first UI, and modern accounting workflows.

16K+

INSTALLS

4.8★

RATING

#1

IN CATEGORY

A modern invoicing and factor-management app for Iranian small businesses and freelancers. Full Jalali calendar support, Persian-first data entry, tax-compliant PDF/print output, and multi-format export. Purpose-built for the accounting patterns real Iranian teams use — not a template ported from a Western tool.

The layer that adds ~25% to Bazaar-verified installs

The best choose the best.

For years, some of Iran's most established internet teams have counted on us for high-stakes work — product launches, infrastructure, integrations.

Idea → Ship → Grow — a four-step pipeline, in production.

Every product moves through the same four stages. Each has a clear input and a clear output.

1

01

Design

Discover a real user gap, then shape the experience — flow, screens, motion, edge cases. Persian typography and RTL solved from the first sketch.

2

02

Build

Native or cross-platform, using reusable modules — backend, payments, auth, analytics, admin panel. Ship weekly, not quarterly.

3

03

Launch

Store deploy on Bazaar, Myket and Play. Owned-media assets, social kit, marketing toolkit ready before day one.

4

04

Operate

Support, monitoring, iteration. In-app purchases, subscriptions, ads — with a dashboard for shared decisions.

We operate what we ship.

Live payment integrations, store relationships, real user support — day after day, year after year.

● Store relationships

Direct publisher access on Bazaar and Myket. Featured placements. ASO discipline year-round.

● Review-response cadence

Answered within 48h. 4.6★ across the portfolio because operations answers every message.

● Crash-free operations

Staged rollouts, crash triage, rollback drills. Yearly OS-target uplifts, dependency hygiene.

● Payment infrastructure

Multi-store IAP, subscription lifecycles, invoice validation. Not a wrapper — our own verifier.

● Content & support

Multi-channel support (chat, email, ticket, phone). Documentation in Persian and English.

● Analytics & dashboards

Own the data. Cohort retention, funnel analysis, custom event pipelines — no black-box SDKs.

What six years of shipping actually produces.

Every metric verified from public store data or our own dashboards. Nothing fabricated.

14.5M

Unique installs

Across Bazaar, Myket, Google Play, and direct downloads.

60+

Apps shipped

Consumer, utility, AI, gaming, finance, religious, education.

4.6★

Weighted rating

Installs-weighted across every live product. Consistent.

6+

Years of operation

Building, shipping, and operating consumer software since 2019.

~30

Tools in production

Every tool listed on the site is one we actually use daily.

10

Partner brands trusted

Alibaba, Bazaar, Filimo, Snappfood, Blubank, Nobitex, and more.

Three ways to engage — pick the shape that fits your side.

Every engagement starts with a defined pilot, a written brief, and a clear success metric. No open-ended retainers.

01

Strategic partnership

You bring distribution, content, or an audience. We bring the product engine — Android, backend, AI, operations. Rev share or licensing.

partnerships@kahroba.studio

02

Product & engineering services

You have a product idea, funding, or an existing app that needs an operating team. We take it end-to-end or plug in senior-only.

partnerships@kahroba.studio

03

Careers

Senior engineers, designers, AI product builders. Small team, ownership, market-rate compensation. No CV form — one email is enough.

careers@kahroba.studio

Let's talk about your product.

*Tell us what you're building, what stage you're at, and what would make this work worth doing.
We reply within two business days.*
